WEEK 1 WEBSITE UPLOADS

This was the first weekend of posting meet scores and uploading meet result files to the website. As of Monday morning all meet results had been uploaded with only one remaining meet having a minor problem. There was an email issue with two uploads which was resolved.

It is important to stress importing the swimmer selection file from the other team. Yourway recommends generating two swimmer selection export disks for exchange with the other team. One as a backup in case the original cannot be read.

If a swimmer is added to the visiting team roster, they should generate a roster export disk for importing before the meet in case the new swimmer is entered as a substitution.

If the other team's swimmers are manually input there will be no birthdates. This will result in incomplete posting of the results on the website.

There was some confusion relating to the log file and the meaning of the following message types:

    ERROR LINE xx: No swimmer (n/s) - record   discarded.
    ERROR LINE xx: Disqualified swimmer – record discarded
    ERROR LINE xx: Invalid time (0.0) – record discarded

These are information messages indicating a particular swimmer will not be added to the website Leaders database which is used to generate the Leader Reports.
